ULTRASONIC FLOWMETER <M-Flow PW>

DATA SHEET

FLR-3, FSS, FLY

This flowmeter is a clamp-on type ultrasonic flow meter based on transit-time measuring method. Making full use of the latest electronics and digital signal processing technologies, we realized the equipment with improved anti-bubble performance and high accuracy. The communication function (MODBUS: Option) is also applicable.

FEATURES

1. Excellent resistance against aerated flow

Fuji's unique ABM feature improves measurement reliability for different flow like slurries, sludge, raw sewage and bubble-contained flow (acceptable up to air bubble of 12% volume at 1m/s velocity).

2. High accuracy

Standard accuracy: $\pm 1.5\%$ ($\pm 1.0\%$ is also available)
Adoption of new sound velocity measurement system permits measurements of fluids of unknown sound velocity. Further, affection from fluid temperature and pressure is negligible.

3. Compact and light-weight

Thanks to the adoption of the latest electronics, the flow transmitter is compact size and light weight.

4. Quick response

With the use of high-speed micro-processor suited for digital signal processing, the fast response time is realized.

5. Multi-lingual

The following languages are supported for display:
Japanese (Katakana), English, German French, and Spanish.

6. Excellent performance and easy operation

LCD and function keys are allowing easy configuration and trouble shooting.

- LCD with back light
- Easy mounting of sensor
- Extendable rail type detector up to $\Phi 50$ to $\Phi 1200\text{mm}$
- Trouble shooting
- Easy operation with keypad on the front surface of the flow transmitter

Note 1: Normally select silicone rubber as acoustic coupler. Silicone rubber in tube (100g) is furnished. If you place an order for several units, 1 tube may suffice for every 5 units. Select silicone-free grease for semiconductor manufacturing equipment or the like that is vulnerable to silicone. The silicone-free grease is water-soluble and, therefore, cannot be used in environment exposed to water or on piping subjected to a condensation. Since the grease does not set, a periodic maintenance (cleaning, refilling every about 6 months at normal temperature) is necessary.

Checked items before purchase

Following conditions may cause failure of the measurement or to reduce the accuracy by this flow meter.

Please consult and ask Fuji Electric for checking with actual equipment previously if you have hard to judge the appropriate application.

1)Fluid

- If fluid contains a large amount of bubbles (approx. 12vol% or more at 1m/s flow rate)
- If fluid has bad turbidity 10000(mg/L) or more,
- If fluid contains slurry or solid materials (about 5wt%)
- If flow rate is low Reynolds No.10000 or less, (reference: flow rate 5m³/h with φ100mm)
- If it is circulating oil, liquid medicine of low concentration, waste liquid and hot spring,

2)Pipe

- If inside pipe is rusty carbon steel pipe,
- If inside pipe having adhering substances and sediment
- If outer surface of cast-iron pipe is rough,
- If pipe wall is tick such as ruinous pipe,(PP material 15mm or more, PVDF material 9mm or more)
- If it is SGPW pipe,
- If lining pipe is removed from pipe,(Teflon,PVC,Glass)
- If it is rubber pipe,

3) Length of the straight pipe

For accurate measurement, straight pipes are needed between up and down stream side of the measuring part. Please meet the straight pipe conditions according item4.

Caution on use

- 1) Do not damage the sensor or signal mounted on the pipe.
- 2)Make sure to fill the fluid inside the pipe to measure .
- 3)When you use horizontal pipe, it is recommended to install the sensor horizontally.
- 4)When you use the grease as acoustic coupler to install the sensor for outdoor use, it is recommended to install the waterproof cover to prevent from the degradation.
